*“The bicycle has become an important element for consideration in the highway design process. **Fortunately, the existing street and highway system provides most of the mileage needed for bicycle travel.**”*

- *900 pages of guidance*
- *Less than 1 page on bicycles*

# FHWA Status of Existing Bikeway Treatments

Description of Bicycle Facilities	Status in the FHWA's Manual on Uniform Traffic Control Devices (MUTCD)	Are <a href="#">FHWA Experiments</a> in Progress?
<b>Signs and Markings</b>		
<b>Bike Lanes</b>		
Conventional bike lanes	Can be implemented at present time	
Continuation of bike lanes up to intersections	Can be implemented at present time	
Dashed bike lanes through intersections	Can be implemented at present time	
Use of green pavement markings for bike lanes and cycle tracks within intersections	Interim approval has been granted. Requests to use green colored pavement need to comply with the provisions of Paragraphs 14 through 22 of Section 1A.10	Yes
Green bike lanes at conflict points such as heavy turning and merging locations	Interim approval has been granted. Requests to use green colored pavement need to comply with the provisions of Paragraphs 14 through 22 of Section 1A.10	Yes

## NACTO Urban Bikeway Design Guide

The purpose of the NACTO Urban Bikeway Design Guide (part of the Cities for Cycling initiative) is to provide cities with state-of-the-practice solutions that can help create complete streets that are safe and enjoyable for bicyclists.

Official Print Guide First Edition Released

## Design Guidance

### Two-Stage Turn Queue Box

#### Required Features

- 1 An area shall be designated to hold queuing bicyclists and formalize two-stage turn maneuvers.<sup>71</sup>
- 2 Pavement markings shall include a bicycle stencil and a turn arrow to clearly indicate proper bicycle direction and positioning.

SALT LAKE CITY, UT (PHOTO: SALT LAKE CITY PUBLIC WORKS)

VANCOUVER, CANADA (PHOTO: WILL VANLUE)

3 The queue box shall be placed in a protected area. Typically this is within an on-street parking lane or between the bicycle lane and the pedestrian crossing.

4 In cities that permit right turns on red signal indicators, a "No Turn on Red" sign shall be installed overhead to prevent vehicles from entering the queuing area. (MUTCD Section 2B.54)

#### Recommended Features

- 5 In cases where a constrained roadway geometry or right of way prevents the creation of a dedicated two stage turn queue box in a protected location:
  - The pedestrian crosswalk may be adjusted or realigned to enable space for a queue box.
  - A bike box may be provided behind the pedestrian crossing to serve the same purpose. This configuration should only be considered if pedestrian volumes are low, as bicyclists must yield to pedestrians in the crosswalk before entering the queue.
- 6 The queue box should be positioned laterally in the cross-street, to promote visibility of bicyclists.
- 7 Colored paving inside of the queuing area should be used to further define the bicycle space.
- 8 Markings across intersections should be used to define through bicyclist positioning.

Cycle Track Buffer Configuration

Parking Lane Configuration

Crosswalk Setback Configuration  
Wider corner radii, set back pedestrian crossing, and/or narrowed bikeway spaces, provides opportunity for queue box.

Bike Box Configuration  
Bicyclists yield to pedestrians. Not recommended in areas with high pedestrian volumes.

T-Intersection Parking Lane Configuration

T-Intersection "Jughandle" Sidewalk Configuration

5 Queue box shall be placed in a protected area. Typically within an on-street parking lane or cycle track buffer.

6 Optional queue box location in line with cross traffic.

9 Optional queue box location outside of traffic flow.

#### Optional Features

- 9 The queue box may be positioned laterally in the cross street parking lane rather than in front of the travel lane. This may require bicyclists to weave into the travel lane to resume through movement if no dedicated bicycle facility is present since the parking lane ahead will be occupied.
- 10 At midblock turning locations, the queue box may be integrated into the sidewalk space. This configuration is also known as a "jughandle." Consider the use of some form of signalization at these locations.
- 11 Signage may be used to define proper positioning and improve visibility of the queue box.
- 12 A bicycle signal, with leading bicycle interval, may be installed in conjunction with the two-stage turn queue box.<sup>72</sup>
- 13 Guide lines, pavement symbols, and/or colored pavement may be used to lead bicyclists into the queue box.

## Design Guidance

### Median Refuge Island

#### Required Features

- 1 The desirable width of the median refuge is 10 feet or greater. The absolute minimum width is 6 feet.<sup>73</sup>
- 2 When applied on a two-way street, the median refuge shall be placed along the centerline of the roadway between the opposing directions of travel.
- 3 Pavement markings on the approach to the refuge island shall follow the guidance provided in Section 3L02 of the MUTCD.<sup>74</sup>
- 4 The approach edge of the raised median shall be outlined in retroreflective white or yellow material.<sup>75</sup>
- 5 In areas with snow accumulation, reflective delineators shall be used to mark the island for increased visibility to snow plow crews.

6 The height of the island should be curb level, 6 inches high. When used as an exclusive bicycle facility it may be desirable to keep the refuge area at street level.<sup>76</sup>

7 An angled cut-through (45 degrees) should be provided to position bicyclists to face oncoming traffic. If the cut-through is to be shared with pedestrians, the 45-degree angle of the curb should transition back to being perpendicular to the street to provide proper directional cues for the blind.

8 The refuge area should be wide enough to accommodate two-way bicycle traffic.

#### Optional Features

- 9 "Advanced Stop" signs and markings for motorists may be included.<sup>78</sup>
- 10 Landscaping may be provided in the median, but it should not compromise visibility.<sup>79</sup>
- 11 Lighting may be installed for improving visibility of the facility at night.
- 12 At signalized intersections, push buttons or other detection methods may be provided to actuate the signal head.
- 13 The median refuge can be carried across the entire cross street approach to act as a diverter to prevent cut-through traffic on a bicycle route.

#### Recommended Features

- 6 The length of the refuge island should be greater than 6 feet.<sup>76</sup>
- 7 Reflective markers should be used on the approach to the nose of the island's curb.<sup>77</sup>

7 Reflective markers should be used on the approach to the nose of the island's curb.

6 The height of the island should be curb level, 6 inches high.

8 The length of the refuge island should be greater than 6 feet.

3 Desirable Width: 10 feet or greater  
Minimum Width: 6 feet
