Tucson Region Roadway Segment Traffic Counts

The following report presents segment-level daily traffic count data collected by the Pima Association of Governments (PAG) and the Arizona Department of Transportation (ADOT) within the Tucson Region during from 1998 through 2011.

Methodology:

PAG and ADOT collect weekday traffic count data for selected regionally significant roadway segments within the Tucson metropolitan area. PAG's traffic count data is collected by a consultant firm, usually on Tuesday, Wednesday or Thursday in the fall of the year. Typical traffic data collection methods involve the placement of pneumatic tubes or optical detectors connected to recording devices at selected locations along roadway segments for a period of at least 48 contiguous hours.

Warning:

PAG's goal is to collect a representative traffic count for each roadway segment. However, counting devices can and sometimes do malfunction, resulting in erroneous results. Nearby roadway construction, traffic accidents and other unknown incidents can significantly affect traffic and result in non-typical counts. Even without specific incidents, traffic counts can vary significantly at different locations within a given segment and from day-to-day, month-to-month and throughout the year.

Assumption of Risk:

All parties using these data understand and acknowledge that these data provided by PAG are subject to constant change and accuracy cannot be guaranteed. **ALL DATA ARE PROVIDED AS IS, WITH ALL FAULTS, AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE.** PAG does not warrant that the data will meet the requirements of the other party or that the data will be error free, or that data defects will be corrected.
