

# Hoboken, NJ

## Redesigning Sinatra Drive for Multi-Modal Safety

### Project Highlights

Hoboken's Sinatra Drive is a scenic waterfront boulevard with unobstructed panoramic views of the New York City skyline, making it an ideal place for people to walk, jog, bike, and scoot. For the central 0.7-mile stretch from Fourth Street to Sinatra Drive North, conditions are inadequate for the large volumes of users. Therefore, in 2022, the City of Hoboken began a \$6 million redesign of the corridor that will bring transformative improvements for all modes of transportation that are consistent with Hoboken's Vision Zero Action Plan and Climate Action Plan goals. Construction is expected to begin in spring 2024 and conclude in early 2025.

#### Improvements included in the project:

- 20 MPH speed limit
- 12' wide two-way protected bikeway connecting bikeways along Hoboken's South Waterfront and North Waterfront areas
- 14 high-visibility striped crosswalks
- 5 raised crosswalks to improve visibility and reduce vehicular speeds
- 13 rectangular rapid flashing beacons (RRFBs) to improve visibility
- Widened sidewalks
- 8 painted curb extensions
- 5 concrete curb extensions
- 2 curb extensions with green infrastructure
- 3 driver feedback signs
- 20 curb ramps upgraded for ADA compliance
- 2 additional parking spaces designated for persons with disabilities
- Increased capacity for bicycle parking
- Bicycle wayfinding signage
- Lighting upgrades
- 164 street trees planted
